Sachin Patel

Passionate Python Developer(AI/ML)

sachinpatel7496007@gmail.com 9824117496 Ahmedabad, Gujarat 2002-10-16

Sachin LinkedIn Portfolio

PROFILE

I'm a passionate Python & AI/ML developer with over 2+ years of experience in building scalable backend systems and AI-driven solutions. I specialize in Python, Django, Django REST Framework (DRF), and FastAPI, with a strong focus on API development, automation, and system integration.
I have hands-on experience working with modern AI technologies such as LangChain, LangGraph, LlamaIndex, and Amazon Bedrock Agents to build intelligent workflows, AI agents, and context-aware applications. I have also developed Generative AI solutions and RAG-based systems for real-world use cases.
In the field of Machine Learning and Computer Vision, I have fine-tuned YOLO models and built custom object detection pipelines using annotated datasets. I am experienced in working with vector databases like Pinecone and handling large-scale data for AI applications.
I have strong database expertise in PostgreSQL and MySQL, focusing on performance optimization and scalable design. Additionally, I have worked with AWS services such as Amazon EC2, S3, CloudWatch, SageMaker, and ECS to deploy, monitor, and scale applications in production environments.
I enjoy solving real-world problems, integrating third-party APIs, and building end-to-end intelligent systems that are efficient, scalable, and innovative.

PROFESSIONAL EXPERIENCE

Senior Python Developer, *AjeevanTech Global IT Solution* 01/2023 – Present
Surat, India

I gained hands-on experience in statistical analysis, machine learning, and web development using Django. I developed skills in data manipulation and backend development, contributing to real-world projects in data science and web applications.

SKILLS

- Python
- DRF
- Chatbot
- Langgraph(AI framework)
- Deep Agent
- DSPY(AI framework)
- AI/ML
- Critical Problem-Solving
- YOLO/RetinaFace
- AWS(S3,EC2,Lambda,RDS)
- AWS SageMaker
- Django
- Fastapi
- Rag
- Langchain
- Llamaindex
- SQL - Sequal Database
- Postgresql
- n8n(Automation)
- Vector Database
- Bedrock Agents
- Computer Vision

PROJECTS

QBot – AI-Powered Website Chatbot Platform, *Reactjs, Fastapi, Postgresql, Pinecone, Amazon Bedrock, EC2*

- QBot is an AI-powered chatbot platform that enables companies to integrate intelligent chatbots into their websites using their own knowledge base. It allows admins or businesses to create workspaces, upload documents and FAQs, and activate selected data for chatbot responses.
- The platform provides a customizable widget script that can be easily embedded into any website. Once deployed, the chatbot interacts with users in real-time, delivering accurate and context-aware answers, helping businesses automate customer support and improve user engagement.

Vigilense – AI-Powered Computer Vision Surveillance Platform, *FastAPI, YOLOv26, OpenCV, InsightFace, DeepFace, ByteTrack, DeepSORT, Roboflow, AWS S3, PostgreSQL, Docker, WebSockets.*

- Developed an AI-powered computer vision surveillance platform to process CCTV camera streams, images, and videos for real-time monitoring and analytics. Built multiple AI modules including object detection, people detection and counting, face detection, face recognition, attendance management, vehicle detection, intrusion detection, and restricted zone monitoring. Implemented multi-object tracking to track individuals and vehicles across video streams with high accuracy. Integrated advanced computer vision models to perform real-time identification, tracking, and event generation under varying environmental conditions. Designed a scalable processing pipeline capable of handling large-scale video analytics, real-time alerts, and monitoring dashboards for industrial and enterprise security use cases.

HireMe AI – Intelligent Resume Screening & Candidate Management System, *: FastAPI, LangChain, LangGraph, OpenAI, Ollama, RAG, PostgreSQL, ChromaDB, SQLAlchemy, Pydantic, Docker, AWS S3, AWS Lambda, Celery, Redis, React.js, WebSockets.*

- Developed an AI-powered Resume Screening and Candidate Management System to automate the recruitment process and help HR teams identify the most relevant candidates based on job requirements. Built a smart matching engine that analyzes Job Descriptions (JDs) and candidate resumes to rank applicants according to skill alignment, experience, qualifications, and job fit. Implemented AI-driven resume parsing to extract structured candidate information and store it in a centralized database for efficient management. Developed features for creating and managing JDs, uploading and organizing resumes, candidate shortlisting, and generating match scores with detailed insights. Leveraged LLMs and agent-based workflows to improve matching accuracy, reduce manual screening effort, and significantly speed up the hiring process

Learnify AI,

Reactjs, Fastapi, Langchain, Langgrapg, Langsmith, Ragpipline, Postgresql, Lambda, S3, Cloudwatch,

- Learnify is an AI-powered education platform designed to simplify exam preparation and content generation. Users can upload documents or select study material based on their academic standard or syllabus. The system intelligently analyzes the content and extracts key topics and concepts. Based on user requirements, it dynamically generates exam papers including MCQs, short answer questions, and long descriptive questions. The platform allows customization of question types, difficulty levels, and chapters. It ensures relevant and structured question generation aligned with the selected material. Overall, Learnify helps students and educators save time by automating exam creation and improving learning efficiency.

Website Generator AI, *Fastapi, DSPY, Langgraph, Langchain, Deep Agents, Amazon Bedrock, S3, AWS Lambda*

- Website Generator AI is an AI-powered web creation platform where users enter a brief business description, and the system intelligently asks follow-up questions to understand goals, industry, and design preferences. Based on user inputs, the AI automatically generates single-page or multi-page websites with structured layouts, relevant content, and responsive design. The platform streamlines website creation by combining conversational AI, dynamic page generation, and customizable components, making it easy for businesses to launch professional websites with minimal effort.

Barter Club, *DRF, PostgreSQL, Razorpay, Amazon CloudWatch*

- Barter Club is a digital barter and voucher management platform built using Django REST Framework (DRF) and PostgreSQL, with Razorpay integration for secure payments. The system allows merchants to create and manage vouchers and gift cards, while users can purchase, redeem, and track vouchers through a wallet-based flow. It supports role-based access (admin, merchant, and user), voucher lifecycle management, transaction history, and a scalable API-driven architecture suitable for real-world applications.

AI-Powered Telegram Support Bot, *n8n, Automation*

- Built an end-to-end automated Telegram support bot using n8n, enabling seamless handling of both text and voice messages. Integrated AI (OpenAI/LLM) for natural language understanding, automatic transcription of voice notes, and intelligent reply generation. Implemented workflow automation for message routing, logging, error handling, and analytics. This solution reduced manual support effort and delivered real-time, 24/7 conversational assistance..
